SKILLS

- Programming Languages:** Java, C, C++, JavaScript
- Core CS Fundamentals:** Data Structures and Algorithms, OOP, DBMS, Operating Systems, SDLC
- Databases:** SQL, MySQL, MongoDB
- Data Science and Machine Learning:** Data Preprocessing, EDA, Feature Engineering, Model Evaluation
- System Design Fundamentals:** Client-Server Architecture, REST API Design, Database Schema Modeling
- Web Technologies:** React, Node.js, Express.js
- Tools:** Git, GitHub, Postman, VS Code

PROJECTS

- Hotel Booking Platform** | React, Node.js, Express.js, MongoDB, Clerk | [GitHub](#) **Nov 2025 - Dec 2025**
 - Created a full-stack hotel booking application with separate interfaces for customers and hotel owners.
 - Implemented CRUD operations, authentication, and role-based dashboards to manage bookings.
 - Designed RESTful APIs to manage bookings, users, and hotel listings efficiently.
- Diabetes Risk Prediction System** | Python, Scikit-learn, Streamlit | [GitHub](#) **Aug 2025 - Sep 2025**
 - Built an end-to-end machine learning model for diabetes prediction using data preprocessing, feature engineering, and model evaluation techniques.
 - Trained and evaluated ML models (SVM, Random Forest) on healthcare dataset (700+ records), achieving 78% accuracy and enabling early-stage diabetes risk prediction.
 - Deployed an interactive Streamlit web app for real-time predictions with user input handling and visualization.
- India Air Quality Analysis** | Power BI, Data Visualization | [GitHub](#) **Jul 2024 - Aug 2024**
 - Built an interactive Power BI dashboard using government air quality data to analyze pollutants like PM2.5, PM10, NO2, and CO across multiple cities and states.
 - Designed dynamic visualizations including AQI categorization, KPI cards, and slicers to enable real-time filtering and comparative analysis.
 - Analyzed pollution trends to uncover meaningful insights on health impact, making data easier to understand for non-technical users.

TRAINING

- W3grads** **Jun 2025 - Jul 2025**
 - Software Developer Summer Training (Full-Stack | MERN)**
 - Completed structured training in full-stack with a focus on backend services and API-driven applications.
 - Developed full-stack MERN application implementing authentication, REST APIs, and MongoDB schema design.
 - Gained hands-on experience with database schema, authentication workflows, API integration, and basic debugging during development and testing.

CERTIFICATES

- Data Structures and Algorithms (DSA) | [Udemy](#) **Sep 2025 - Oct 2025**
- Full-Stack (MERN) with Generative AI | [W3grads](#) **Jun 2025 - Jul 2025**
- C++ Programming Beginner to Advance | [Udemy](#) **Jan 2024 - Feb 2024**

ACHIEVEMENTS

- Applied data preprocessing, exploratory data analysis (EDA), and machine learning techniques across multiple academic and personal projects.
- Worked with core data structures in Java including arrays, linked lists, stacks, queues, and trees for algorithmic problem-solving.
- Solved 250+ Data Structures and Algorithms problems across platforms such as LeetCode and GeeksforGeeks.

EDUCATION

- Lovely Professional University** **Phagwara, Punjab**
Bachelor of Technology - Computer Science and Engineering **Aug 2023 - Present**
